CASE NO. _____

DECLARATION OF DR. HOWARD MINKOFF

I, Howard L. Minkoff, MD, declare and state as follows,

1. I am the Chairman of Obstetrics and Gynecology at Maimonides Medical Center and a Distinguished Professor of Obstetrics and Gynecology at SUNY Downstate. My curriculum vitae is attached as Exhibit A.
2. I have been a national board examiner in obstetrics and gynecology and maternal-fetal medicine, and have chaired the March of Dimes committee on Maternal-Child Health Issues. I chaired the Program Committee of HealthRight and the perinatal safety

committee of the Greater New York Hospital Association.

3. I previously served as President of the New York Obstetrical Society. I have edited four books, written over sixty book chapters, and over 330 peer reviewed publications. I am a member of four editorial review boards and am an editorial reviewer for 50 medical journals.
4. I recently completed my tenure as vice-chair of ACOG's national ethics committee.
5. I have been a member of the organizing committees of and have been a speaker at three Consensus Development Taskforces (Cesarean Section by Choice, Vaginal Birth after Cesarean Section, Screening for Diabetes) of the US Public Health Service.
6. I have reviewed the July 10, 2014 letter from Cheryl Tibbett, Chief Financial Officer of Bayfront Health, to Jennifer Goodall.
7. The letter outlines a number of potential risks of undertaking a trial of labor after cesarean surgery. While the described risks exist, the letter fails to mention the potential risks of undergoing repeat cesarean surgery. The risks that accompany repeat cesarean surgery include infection, hemorrhage, embolism, or even death.
8. Even though there are risks involved with a trial of labor after cesarean surgery, the fundamental tenets of bioethics as articulated by the American College of Obstetricians and Gynecologists Committee on Ethics, on which I have served as vice-chair, demand that the patient be able to freely choose which risks she will undertake and which she will refuse. That Committee has stated:

Pregnant women's autonomous decisions should be respected. Concerns about the impact of maternal decisions on fetal well-being should be discussed in the context of medical evidence and understood within the context of each woman's broad social network, cultural beliefs, and values. In the absence of extraordinary

circumstances, circumstances that, in fact, the Committee on Ethics cannot currently imagine, judicial authority should not be used to implement treatment regimens aimed at protecting the fetus, for such actions violate the pregnant woman's autonomy.

Comm. on Ethics, Am. Coll. Obstetricians & Gynecologists, *Maternal Decision Making, Ethics, and the Law*, Committee Opinion No. 321, Nov. 2005. (Attached as Exhibit B).

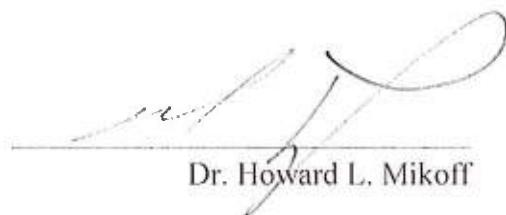

9. In my many years as a practicing obstetrician gynecologist, I have attended numerous patients who have desired to have a trial of labor after one or more cesarean surgeries. This is by no means an extraordinary occurrence that would warrant abandoning all standards of medical ethics, making threats toward patients, or invoking child welfare investigations or judicial proceedings to force unconsented care.
10. The proper course of action in any situation that involves medical risk is directive counseling, whereby the medical provider plays an active role in the patient's decision by providing advice or guidance. Doctors may be persuasive or even emphatic in raising their concerns about potential risk, but ultimately must respect the patient's decision. This is particularly true when the patient has made a decision to delay or forego a recommended procedure. A physician may let a patient know that she is assuming responsibility for her decisions by asking her to sign a form acknowledging that she has been informed of the potential risks and that she is acting against medical recommendations.
11. I am concerned that a letter containing threats of the sort posed by the July 10, 2014 letter from Cheryl Tibbett would have the effect of frightening women away from hospitals and medical care. As Ms. Tibbett's letter states, there are risks involved with a trial of labor. These risks are best managed in a medical setting, and a woman who receives this type of

threat is unlikely to feel the trust that is necessary for effective physician-patient communication.

12. In conclusion, I believe that the letter sent to Jennifer Goodall is not medically or ethically justifiable, and is destructive to the physician-patient relationship.

I declare under penalty of perjury that the foregoing is true and correct to the best of my knowledge and belief.

Executed on July 21, 2014
